Download - grey hair: The epigenetic theory of the etiology of cancer and aging. The term epigenetic refers to heritable changes in gene expression that occur without any change in the DNA sequence. These changes can be triggered by events during development, and later influence the life history of the cell or organism. Epigenetic mechanisms are involved in both the malignant transformation of a cell and the aging of an organism. Mutagenesis and oxidative stress are two of the most studied environmental factors that have been shown to cause epigenetic changes and therefore may influence the development and progression of cancer and aging. Thus, the understanding of how epigenetic events may underlie the development of cancer and aging is of great interest and provides insight into the link between environmental factors and disease. Carmen Cozza /

AdView.com Mediobanca, the flagship banking group of Milan-based group Intesa Sanpaolo, is moving ahead with its ambitious plan to create a global powerhouse of digital payment services by acquiring the London-based Clydesdale and Yorkshire bank. Intesa, a large Italian lender that made waves recently by adopting a new business strategy to create a credit card payment system similar to China's UnionPay, said it will buy the Yorkshire business, which holds branches in the UK, and the Clydesdale business, with 62 branches in Scotland and Northern Ireland. Financial terms of the acquisition were not disclosed. The two banks are expected to be combined with a newly created entity and be listed on the London Stock Exchange. Intesa said the deal is expected to close in the first half of next year. "Intesa Sanpaolo will form a powerful digital finance group to generate strong competitive advantages in a market where the new customer profile and the digital capabilities of the customer offer good opportunities," said Gianluigi Luzz 82157476af
